Garrison Dental Solutions Launches Advanced Band & Wedge Instrument: The Next Step in Precision Placement

Spring Lake, MI – Garrison Dental Solutions, a global leader in restorative dental solutions, is pleased to announce the launch of the Advanced Band & Wedge Instrument, expanding its precision instrument line with a new option engineered to elevate control, grip, and confidence in clinical procedures.

Choose Your Grip

With the addition of the Advanced Band & Wedge Instrument, Garrison now offers three distinct forceps options, each designed to enhance grip, precision, and control—so clinicians can work with confidence across a range of restorative needs. Whether placing a wedge or maneuvering a sectional band into position, there is a Garrison instrument tailored to the task.

A Versatile New Option for Everyday Excellence

The Advanced Band & Wedge Instrument features:

- 45-degree angled tips for improved posterior access
- Specially engineered gripping teeth for secure band and wedge placement
- Approximately 16X the grip* of standard cotton pliers—3X stronger than Garrison's Enhanced Cotton Plier

This makes it the ideal solution for clinicians who need precise handling and ergonomic reach without the intensity of the Ultimate Band Instrument.

Three Precision Instruments—One Unified System

		
Precision Band Wedge Forceps	Advanced Band Wedge Forceps	Ultimate Band Forceps
P/N NTG-DF6-8	P/N BWI	P/N BFA-1
An economical, high-performance upgrade delivering 4X the grip* of standard cotton pliers, ideal for general use.	Purpose-built for wedge and band placement, with improved grip and a 45-degree angle for better access.	The gold standard, delivering 66X the grip* of standard pliers and a 105-degree angle with tungsten carbide inserts for maximum force and control. (Note: For band placement and removal only. Not to be used with wedges.)

Whether you need reliable versatility, focused posterior access, or maximum precision, Garrison's instrument lineup allows you to choose your grip based on the clinical demands of the procedure.

Availability

The Advanced Band & Wedge Instrument is available now in the United States and will become available in markets worldwide over the coming months. Clinicians outside the U.S. should check with their local Garrison dealer for specific launch timing.

About Garrison Dental Solutions

For over 25 years, Garrison Dental Solutions has been redefining sectional matrix systems and restorative instrumentation. Focused on clinician success, Garrison develops innovative tools that simplify procedures and elevate patient care.
