

Real Easy. Real Tight. Real Fast!

For all posterior restorations!

Real Easy!

The reels pop into the handle without any fuss! Press the reel into the handle and retract the grippers to lock the reel in place. Plus, if you use the regular matrices (yellow hubs) they can be easily pushed through contacts.

Real Tight!

Tight contacts and excellent contour are what Reel Matrix is all about. These thin matrices are pre-contoured in three dimensions and when combined with anatomical wedges and separator rings, the result is amazingly tight contacts virtually flash-free at the natural height of contour.

Real Fast!

Pre-loaded reels mean you can just lock them in and go. The retainerless design greatly speeds up quadrant work while improving visibility and patient comfort.

Margin Elevation Band restores deep caries without the trauma.

Margin elevation requires a matrix that will properly adapt and isolate the subgingival area. This is not possible with traditional matrix materials (Figure A). The narrow Margin Elevation Band, with its enhanced conical design, is able to slide down subgingivally and properly seal this area (Figure B).

Margin elevation band is .002" thin.

Super-thin dead-soft bands (white hubs) are .0012" thin.

Regular bands (yellow hubs) are .0015" thin and can be placed through existing contacts.

A Blue View cure-through option at .0029" thin is available if you prefer trans-enamel curing.
